

EPOC

HANDCRAFTED BEDS

Since 1949

White Edition

Making its debut at Decorex 2022, the White Edition bed set from EPOC Handcrafted Beds takes significant strides to ensuring that sustainability is at the heart of the product - not an afterthought. All component parts are designed to be fully recyclable at end-of-life, avoiding landfill.

- 800gsm NZ Wool / Silk blend
- Fire Resistant Chemical-free mattress fabric
- White embroidery on panels and handles
- Shallow 20cm pocket sprung divan on hand-made hardwood legs (x4)

GOTS-CERTIFIED COTTON, FLAX & HEMP PLA

The Global Organic Textile Standard (GOTS) is the worldwide leading textile processing standard for organic fibres, including ecological and social criteria, backed up by independent certification of the entire textile supply chain. Our GOTS Fibre content is 100% Vegan, 100% natural, 100% recyclable, plastic-free and chemical-free. Notably, our GOTS cotton is produced on farms using only rainfall irrigation. Fibres are mixed with PLA and thermally-bonded. PLA binding fibre is produced by using plants such as sugar cane to transform greenhouse gases into sugars that can then be fermented. The technology converts lactic acid into a PLA (polylactic acid) polymer to bind fibres.

CUSTOMERS OWN MATERIAL

Divan bases and headboards can be upholstered in our standard range of fabric options available upon request - or supply your own for a truly unique finish - subject to suitable abrasion tests and compliance with Fire Retardancy regulations. A fire retardancy/treatment certificate will be required to accompany the fabric prior to manufacturing.

ZIP & LINK / VELCRO® & LINK

To offer flexibility in terms of rooms, the mattresses can be zipped and linked together to turn a twin room into a double, or vice versa. As an alternative to zip & link, we also offer Velcro® and link.

SPLIT BASES

We advise that deep base double divans will be manufactured in two halves for ease of access. Bases can be split North-to-South or East-to-West. Please inform us at time of order of any split and your direction of preference. North to south is usually the standard split direction.

FIRE RETARDANCY

This mattress and base (where applicable) is fully compliant with BS 7177 (Low Hazard) Crib 3 Fire Retardancy standards for domestic use.

WOOLS OF NEW ZEALAND

Wools of New Zealand is owned by the farmers who grow our wool, and they care about passing on our world to the next generation in as good, if not better, condition than it is now. With integrity, innovation and sustainability being their key pillars, Wools of New Zealand provides unquestionable quality.

100% biodegradable, animal-friendly, rapidly renewable and traceable to source, these are planet-friendly fillings upon which you can sleep soundly.

Allergy and asthma safe, fire safe, a natural insulator and soft and comfortable, these fillings are people-friendly too. Even coming from the other side of the world, their wools have 28% lower greenhouse gas even after being shipped to Europe.

BESPOKE SIZES

All mattresses and divans are manufactured to metric measurements unless otherwise requested. Bespoke, made-to-measure sizes are also available upon request. Note that the above measurements are subject to a tolerance of \pm 20mm. Orders can be placed in either metric or Imperial measurements.

FOOT OPTIONS

Customers can apply their own choice of foot options to their bed. We have a selection of Shepherd or ball castors, glides or feet available (or a combination of both). Customers own choice of foot design can also be provided prior to manufacturing to provide a unique level of customisation.

DRAWER OPTIONS

EPOC Handcrafted Beds offer a range of drawer options to complement our divan base options - with 1-drawer, 2-drawer, 3-drawer, continental drawer, large side, end drawer or slider options. All of our drawers have dovetail joints as standard and can be fitted with soft-close runners.

ENVIRONMENTALLY SUSTAINABLE

As part of our ongoing commitment to environmentally sustainable manufacturing, we ensure responsible sourcing of materials and endeavour to ensure that no waste goes to landfill.
